tec 6. A student measures the temperature $(T)$ of water in an insulated flask at times $(t)$ separated by 1 minute and obtains the following values:

| $t(s)$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $T\left({ }^{\circ} C\right)$ | 98.51 | 98.50 | 98.50 | 98.49 | 98.52 | 98.49 | 98.52 | 98.45 | 98.47 |

(a) Calculate the mean temperature and its standard error.
(b) To test whether or not the water is cooling, plot a graph of the temperature versus time and make a least-squares fit of a straight line to the data. Is there a statistically significant slope to the graph. Be sure to explain this answer.
